

October is Breast Cancer Awareness Month. You probably know someone who has been affected by cancer, whether it was a family member, friend or maybe even YOU. Regardless of the person, a cancer diagnosis and treatment can be overwhelming to endure and hard on family and friends. Patients are often affected by chemotherapy or radiation side effects that can be severe. In particular, Chemotherapy- Induced Peripheral Neuropathy (CIPN) is the most common side effect for someone undergoing chemotherapy treatment for breast cancer. Chemotherapeutic agents, depending on the individual compounds can cause a variety of neuropathies with reported CIPN rates as high as 85%. Many patients feel the side effects of CIPN are worse than the cancer treatments and would rather discontinue their treatments because of the severe neuropathy symptoms.

CIPN has no clear prevention options because neurotoxic antitumor agents cause damage to peripheral nerves (sensory, motor, and autonomic) which begin to occur during therapy and can remain in the body for a long time. In fact, approximately 30 - 40% of patients will still have CIPN symptoms a year or more after finishing chemotherapy.

Board-Certified Medical Oncologist and Founder of Hope Cancer Care of Nevada, Dr. Raja Mehdi, has gone to great lengths to help his breast cancer patients suffering with CIPN so they can finish their chemotherapy program. He refers his patients to Dr. Robert Odell, Interventional Pain Doctor at Neuropathy and Pain Centers of Las Vegas to begin Electric cell-Signaling Treatments (EcST) on the RST-SANEXAS neoGEN® device to help relieve the pain and other symptoms associated with CIPN. According to Dr. Mehdi, many of his patients have completed their chemotherapy regimen while also receiving Electric cell-Signaling Treatments (EcST) at Dr. Odell's pain clinic. Dr. Mehdi makes sure his CIPN patients have the most comprehensive care while they also emotionally cope with the diagnosis and treatment of breast cancer. Thank you for not only restoring HOPE for breast cancer patients suffering with CIPN but all your other patients suffering chronic pain. You are the silver lining to your patients giving them LOVE, LIFE, and HOPE!

SPOTLIGHT ON DENISE MILLER-TSO Nurse Practitioner and Owner of Atlanta Neuropathy Clinic

"I was first introduced to RST-SANEXAS when I took a staff position at a local pain clinic. I'll be honest, I was skeptical that any machine could help people who had suffered from years of chronic pain. I didn't want to be a part of any gimmicks that preyed upon desperate people's misery, so I told myself that if I didn't see results, I couldn't continue to work there."

"However, I must say, I was absolutely blown away by the RST-SANEXAS neoGEN® treatment results! Within two weeks, I became a believer in the Electric cell-Signaling Technology (EcST). Patients were sleeping better, moving more, and reporting marked improvements in their symptoms. They were feeling hopeful again, regaining a belief that they may not need to suffer or take drugs to "just survive." I knew then that I wanted to focus on pain management using RST-SANEXAS neoGEN® device."

Take care and thank you for all that you do!

*"I opened my own clinic, **Atlanta Neuropathy Clinic**, to do just that. My mission was to create an environment where patients truly felt cared for. I wanted to treat patients the way I'd want my mom to be treated -- with patience, warmth, and kindness. As I've told my staff from day one, these patients have suffered from chronic pain for years, and it wears on them. It is our job to make their treatment experience as relaxed (and fun!) as possible. We let RST-SANEXAS neoGEN® do the "real work" while we focus on treating patients like family."*

"I have found the device to be incredibly helpful for a myriad of chronic pain etiologies. One such etiology is pain associated with Chemotherapy-Induced Peripheral Neuropathy (CIPN). I find CIPN to be especially devastating because these patients have already endured so much. They had to process their mortality, then go through the daunting task of chemotherapy, and possibly radiation. The physical and mental toll on these patients is taxing, and just when they are grateful to complete their treatment, they're left with a new problem: PAIN. The pain and numbness of CIPN diminishes the quality of life these patients just fought so hard for. They're often given limited treatment options that fail to address the cause of their pain and further diminish their quality of life."

The CIPN patients at Atlanta Neuropathy Clinic have experienced incredible results from treatment with RST-SANEXAS. Patients report feeling like themselves again, "alive, not just surviving." They report marked improvements in pain, numbness, burning, and cramping. Their mobility improves. They have hope again. Several of my CIPN patients have been able to wean off their gabapentin or Lyrica. RST-SANEXAS neoGEN® device and treatment protocols are truly life changing for CIPN patients."

Denise Miller-Tso Testimonial *"This vibrant patient was diagnosed with chemotherapy-induced peripheral neuropathy in early 2022. By October 2022 she was wheelchair bound due to her markedly reduced sensation in both feet and lower legs. On her initial exam at Atlanta Neuropathy Clinic, she literally had no sharp/dull discrimination. Transferring from wheelchair to treatment chair was challenging since she couldn't discern where her feet were. By her third neoGEN® treatment she had 90% accuracy in S/D discrimination. With this marked improvement I encouraged her to begin working with her physical therapist on walking, not just strength-oriented chair exercises. SHE WALKED INTO HER FORTH TREATMENT WITH A WALKER! If I hadn't been there, I wouldn't have believed it!"*

"It was the most rewarding moment in my professional career."

Denise Miller-Tso Nurse Practitioner & Owner Atlanta Neuropathy Clinic

Patient Testimonial *"I suffered with neuropathy ever since I finished chemotherapy for cancer. I've tried everything that's out there, prescription lotion, pills (I can't tell you the number of pills.) I even flew to Texas for treatment but didn't notice any difference. I was at my wits end."*

"Since starting here at Atlanta Neuropathy Clinic, I feel like I can walk without my cane in a safe area. My pain is much, much better. I'm looking forward to exercise again. I want to do the things I used to do, like travel with my husband. No one tells you that when you have something like this your spouse suffers. He's deprived, too. For the first time in a long time, I'm thinking about traveling. I'm optimistic about what lies ahead."

*I'm hopeful."
JR*

Patient Testimonial *"I thought that the pain from cancer surgery, then radiation burns, then chemotherapy was the worst pain I could have. But then the pain and neuropathy in my feet from chemo started, and I KNEW what the worst pain was. It felt like I was walking on needles every time I stood up. The gabapentin I was prescribed helped some but made me sleep all the time. I was either sleeping or in agony, I had no quality of life. Since I started treatment at Atlanta Neuropathy Clinic, I'm shocked by how much better I am. For the last 2-3 weeks I've been able to decrease my gabapentin because my pain is so much better. For the last few days, I've only taken one! I've been able to visit with family and run errands again. I actually feel alive again". LD*

As Proud Partners of the Vegas Golden Knights, we had the opportunity to have our picture taken with **THE STANLEY CUP!**

We couldn't be prouder of our Las Vegas Golden Knights winning the Stanley Cup and Marchy winning the Conn Smythe Trophy. We honor your hard work on and off the ice and your dedication to our community. We are ready to start the 2023-2024 season and win it again.

Go Knights Go!!
